

Project in Closeout Phase

TWDB DWSRF 62567/61337

This project included replacing waterlines throughout the system. LLWSC is in the process of closing out the project with TWDB. Construction was completed in January of 2025.

The project was administered by the Texas Water Development Board.

The project was funded by the Texas Water Development Board through the DWSRF program.

The water system improvements consisted of transmission lines along FM 3126, FM 350, Weavers Cove, HWY 190 and FM 3459. Installed larger diameter water lines in Sandy Ridge and Lake Tejas Subdivisions.

This project was constructed to provide transmission waterlines for more adequate flow capacity throughout the system and increase line sizes to meet TCEQ requirements.
